

## **Programming Assignment-II**

### **(Command Line Argument & Keyboard Input)**

#### **Using Command-Line Arguments**

- 1.** Write a java program that takes two positive integers as command-line arguments and prints true if either evenly divides the other.
- 2.** Write a java program that takes three positive integers as command-line arguments and prints true if any one of them is greater than or equal to the sum of the other two and false otherwise. (Note: This computation tests whether the three numbers could be the lengths of the sides of some triangle.)
- 3.** Write a java program that takes two int values a and b from the command line and prints a random integer between a and b.
- 4.** Write a java program that prints the sum of two random integers between 1 and 6 (such as you might get when rolling dice).
- 5.** Write a java program that takes a double value t from the command line and prints the value of  $\sin(2t) + \sin(3t)$ .
- 6.** Write a java program that takes three double values x0 , v0 , and t from the command line and prints the value of  $(x0 + v0t + gt^2) / 2$ , where g is the constant 9.78033. (Note: This value the displacement in meters after t seconds when an object is thrown straight up from initial position x0 at velocity v0 meters per second.)
- 7.** Write a program that takes two int values m and d from the command line and prints true if day d of month m is between 3/20 and 6/20, false otherwise.
- 8.** Write a java program that calculates the monthly payments you would have to make over a given number of years to pay off a loan at a given interest rate compounded continuously, taking the number of years t, the principal P, and the annual interest rate r as command-line arguments. The desired value is given by the formula  $Pe^{rt}$  . Use Math.exp ().

**9.** Write a java program that takes three double values x, y, and z as command-line arguments and prints true if the values are strictly ascending or descending (  $x < y < z$  or  $x > y > z$  ), and false otherwise.

**10.** Write a java program that prints five uniform random values between 0 and 1, their average value, and their minimum and maximum value. Use `Math.random()`, `Math.min()`, and `Math.max()`.

**11.** Write a program that takes three int values from the command line and prints them in ascending order. Use `Math.min()` and `Math.max()`.

### Using Keyboard Input

**12.** Write a java program which requests the user to enter a number. The number and the square of the number are then printed on the same line. For example, if 4 is entered, the program outputs:

Number=4                      Square of Number=16

**13.** Write a java program to input some kind of information of a person from the keyboard.

Age of a person

Height of a person

Weight of a person

and display it in the following manner. e.g.

So, you're 35 years old, 6'2" tall and 60KG heavy.

**14.** Input the basic salary of an employee of an organization through the keyboard. His dearness allowance (DA) is 40% of basic salary, and house rent allowance (HRA) is 20% of basic salary. Write a java program to calculate his gross salary.

**15.** Temperature of a city in Fahrenheit degrees is input through the keyboard. Write a java program to convert this temperature into Centigrade degrees.

**16.** The length & breadth of a rectangle and radius of a circle are inputted through the keyboard. Write a java program to calculate the area & perimeter of the rectangle, and the area & circumference of the circle.

**17.** Write a java program that helps the user count his change. The program should ask how many 25 paisa users have, then how many 50 paisa, then how many one rupees. Then the program should tell the user how much money he has, expressed in rupees.

**18.** If you have N eggs, then you have  $N/12$  dozen eggs, with  $N\%12$  eggs left over. (This is essentially the definition of the / and % operators for integers.) Write a java program that asks the user how many eggs she has and then tells the user how many dozen eggs she has and how many extra eggs are left over. A gross of eggs is equal to 144 eggs.

Extend your program so that it will tell the user how many gross, how many dozen, and how many left over eggs she has. For example, if the user says that she has 1342 eggs, and then your program would respond with

Your number of eggs is 9 gross, 3 dozen, and 10.
